[www.cygilant.com](http://www.cygilant.com)

Cygilant delivers industry-leading services that combine the expertise of our certified Cygilant security analysts along with proven processes based on industry best practices and best-of-breed technologies to meet your customers' IT security and compliance objectives.

The Cygilant Alliance Program is designed to help you succeed. Our all-inclusive, transparent subscription-based pricing allows you to generate new, recurring revenue streams. We offer the expert assistance of our own sales organization to help position and present our services to your customers. In addition, you will gain access to our Partner Portal that features easy deal registration and co-branded materials, and other resources to assist in building your success.

# About Cygilant's SOCVue Service

The SOCVue® hybrid security-as-a-service offerings complement other networking and security solutions in place and provide incident details including cause, impact, and recommended remediation guidance. With SOCVue, you no longer need to dig through thousands of security events or analyze raw log files to determine what is happening on the clients' network and what to do about it. This information is centralized and presented in our simple-to-use, multi-tenant SOCVue Portal, which Partners can access to view all relevant customer data and interface with Cygilant's SOC team.

Access your security monitoring data anytime, anywhere, with the SOCVue Portal.

With Cygilant's Alliance Program You Will:

- Benefit from deal registration and protection
- Meet your customer's specific needs and environment with customized deployment
- Gain visibility into clients' real-time security status through Cygilant's multi-tenant portal
- Deliver the best possible customer experience through co-management of service

# Cygilant's Approach

Over the past 15 years, Cygilant has deployed its security platform in a variety of environments, from SME to Enterprise. We understand the challenges these organizations face managing, maintaining, and getting actionable data from Log Management/SIEM, vulnerability management, and patch management solutions on an ongoing basis. That's why we created our SOCVue services.

For more information or to request a demo, visit [www.cygilant.com](http://www.cygilant.com)

Today, we help organizations implement proactive security programs based on industry best practices and provide continuous security monitoring, threat detection, compliance automation, vulnerability management, and patch management, all at a fraction of the cost of alternate solutions.

The screenshot shows the SOCVue Portal interface. At the top, there's a navigation bar with 'SOCVue Portal', 'My SOC', and user information. Below is a 'My Tickets' section with a table of tickets. The table has columns for Customer Name, Subject, Priority, ID, Created Date, Assigned To, Status, Category, and Last Updated On. The tickets listed include various DNS server configurations and vulnerabilities. To the right of the table is a 'Ticket Summary' panel for the selected ticket, showing details like Subject, Vulnerability Name, Status, Severity, and ID. Below the summary is a 'Recently Viewed' section with a list of other tickets and their IDs.
