

DATASHEET

Unified Vulnerability and Patch Management

Cygilant Unified Vulnerability and Patch Management reduces attack surface with continuous vulnerability scans, risk prioritization, and auditable patch management.

For more information or to request a demo, visit www.cygilant.com

Cygilant Unified Vulnerability and Patch Management is a subscription service that combines people, process, and technology and includes:

- **Continuous Vulnerability Scanning and Prioritization** – Cygilant’s Global SOC team of security engineers will manage your Rapid7, Qualys, or Tenable vulnerability scanning solutions to continuously scan IT assets to identify vulnerabilities.
- **Patch Management and Auditable Change Management** – The service identifies and can deploy missing patches for operating systems, including Windows, Linux, MacOS, and third-party applications. It includes auditable workflow to review, approve, schedule, apply, and validate missing patches by asset type and group.
- **Integrated Vulnerability and Patch Management** - Faster workflow with correlation of vulnerabilities identified with the missing patches that will fix the vulnerability on assets. Quickly assess vulnerabilities and deploy the patches in one integrated workflow.
- **Dedicated GSOC Team** – A dedicated Cygilant Cybersecurity Advisor provides a force multiplier effect to manage vulnerability scans and patch large IT environments cost effectively.
- **Compliance Support** – Assistance with meeting compliance requirements related to vulnerability and patch management.

Key Benefits

PROTECT CRITICAL ASSETS

Safeguard customer data, PII, and PHI data, and intellectual property

LEVERAGE YOUR PREFERRED VULNERABILITY MANAGEMENT TECHNOLOGY

Leverage Cygilant to remotely manage Rapid7, Qualys and Tenable VM technologies

INCREASE EFFICIENCY

Save time and money by leveraging the Cygilant SOC team and automating vulnerability and patch management

ACHIEVE COMPLIANCE

Comply with PCI DSS, FFIEC, SOX, GLBA, HIPAA, NIST and others

How It Works

With Cygilant Unified Vulnerability and Patch Management, you don't need to worry about a dedicated team to manage your vulnerability scanning technology or spend 100s of hours combing through 100s of pages of reports trying to make sense of 1,000s of vulnerabilities or managing and scanning your assets for missing patches, and then trying to deploy patches and report on your change management process.

Cygilant can leverage vulnerability scanners - Rapid7 Insight VM, Tenable Nessus, or Qualys - to schedule regular scans and prioritize vulnerabilities based on risk to your organization. The service combines Cygilant Patch Management at no additional cost to identify, prioritize and deploy available patches along with change management controls. Using an intelligent correlation engine to match patches to the vulnerabilities, your dedicated Cygilant Cybersecurity Advisor will partner with your team to manage the VM technology and run scans to identify and prioritize vulnerabilities and missing patches. Acting as an extension to your IT team, Cygilant's goal is to free you of laborious

Vulnerability
and Patch
Management
Delivers:

- **Better return on your existing investments in vulnerability scanning technology**
- **Regular scanning of IT systems for vulnerabilities**
- **Targeted scans for new or modified systems upon request**
- **Automated patch management and auditable change management**
- **Assistance meeting compliance requirements**
- **Regular consultation with Cygilant Security Analysts**

time-consuming tasks and help you reduce your attack surface to prevent disaster. We empower IT and security teams to leverage scarce resources and improve their effectiveness, all at a reasonable total cost of ownership.

Why Cygilant?

Cygilant Unified Vulnerability and Patch Management service reduces your attack surface by proactively identifying vulnerabilities and the patches that fix them across your IT environment, prioritizing them based on business impact and risk, and providing remediation guidance and assistance -- saving you valuable time and reducing operational costs. The service automatically scans your systems and applications for missing patches, including patches that fix software vulnerabilities, and provides a controlled workflow to review, approve, schedule, apply and validate patches. The service includes Cygilant's global security services team who act as an extension to your lean IT team and help you manage your Vulnerability and Patch Management process. The service can save IT team hundreds of hours every year, while providing the vulnerability management necessary to meet compliance mandates and reduce information security risk.

About Cygilant

Cygilant, a pioneer in **hybrid security as a service**, is transforming how mid-market organizations build enterprise-class security programs. Acting as an extension of our customers' IT teams, Cygilant provides continuous security operations based on best-of-breed technology at a fraction of the cost of alternate solutions. Cygilant is a trusted advisor to organizations that need to improve their IT security and compliance posture and protect against cyber threats and vulnerabilities.
